

Modern Hygienic Methods and Dental Implants – “Philips Sonicare AirFloss Ultra“

Excellent oral hygiene prolongates prognosis of dental implants in the oral cavity. Oral hygiene is the best prevention of possible implant failure. Dental hygiene is rightfully seen as an effective tool preventing diseases of hard dental tissues and periodontium, demands for tools to control dental plaque are rising. What used to be seen as the best option in the past is now swept aside and more and more sophisticated methods of oral hygiene are getting ahead. Demands are coming not only from the specialists in dentistry but also from the patients themselves.

This workshop looks into application of the Philips Sonicare AirFloss Ultra as an innovative solution for individual needs in every type of patient.

Understanding the nature of anaerobic and aerobic flora in etiology of periodontal and periimplant pathology inspired development of a tool combining removal dental plaque with water with an aerosol rich in oxygen that gets into interdental and interimplant spaces.

The workshop brings an understanding the principles of patented technology Microburst - combination of droplets of water and air and their advantages.

Finally, it will offer you chance to get to know and experience this technology yourself in form of brush-test.

Every participant absolving brush-test will get the Philips Sonicare AirFloss Ultra as a present.
